

1.

A.

$$P(OC = \text{TRUE}) = 0.8$$

$$P(CT = \text{TRUE}) = 0.05$$

$$P(CRP \mid OC = \text{TRUE}) = 0.1$$

$$P(CRP \mid OC = \text{FALSE}) = 0.001$$

$$P(FT \mid CT = \text{TRUE}) = 0.01$$

$$P(FT \mid CT = \text{FALSE}) = 0.004$$

$$P(FP \mid FT, CT = \text{TRUE}) = 0.9$$

$$P(FP \mid FT = \text{TRUE}, CT = \text{FALSE}) = 0.1$$

$$P(FP \mid FT = \text{FALSE}, CT = \text{FALSE}) = 0.01$$

$$P(IP \mid FT = \text{TRUE}, OC = \text{TRUE}) = 0.15$$

$$P(IP \mid FT = \text{FALSE}, OC = \text{TRUE}) = 0.1$$

$$P(IP \mid FT = \text{TRUE}, OC = \text{FALSE}) = 0.051$$

$$P(IP \mid FT = \text{FALSE}, OC = \text{FALSE}) = 0.001$$

B.

-Prior probability of fraud:

$$P(FT) = P(FT \mid CT = \text{TRUE}) * P(CT) + P(FT \mid CT = \text{FALSE}) * P(CT = \text{FALSE})$$

$$= 0.01 * 0.05 + 0.004 * 0.95 = 0.0043$$

-Probability of fraud:

$$P(FT = T \mid FP = T, IP = F, CRP = T)$$

$$= P(FP = T, IP = F, CRP = T \mid FT = T) * P(FT = T) / P(FP = T, IP = F, CRP = T)$$

C.

$$P(FT = T \mid FP = T, IP = F, CRP = T, CT = T)$$

$$= P(FP = T, IP = F, CRP = T \mid FT = T, CT = T) * P(FT = T \mid CT = T) / P(FP = T, IP = F, CRP = 1,$$

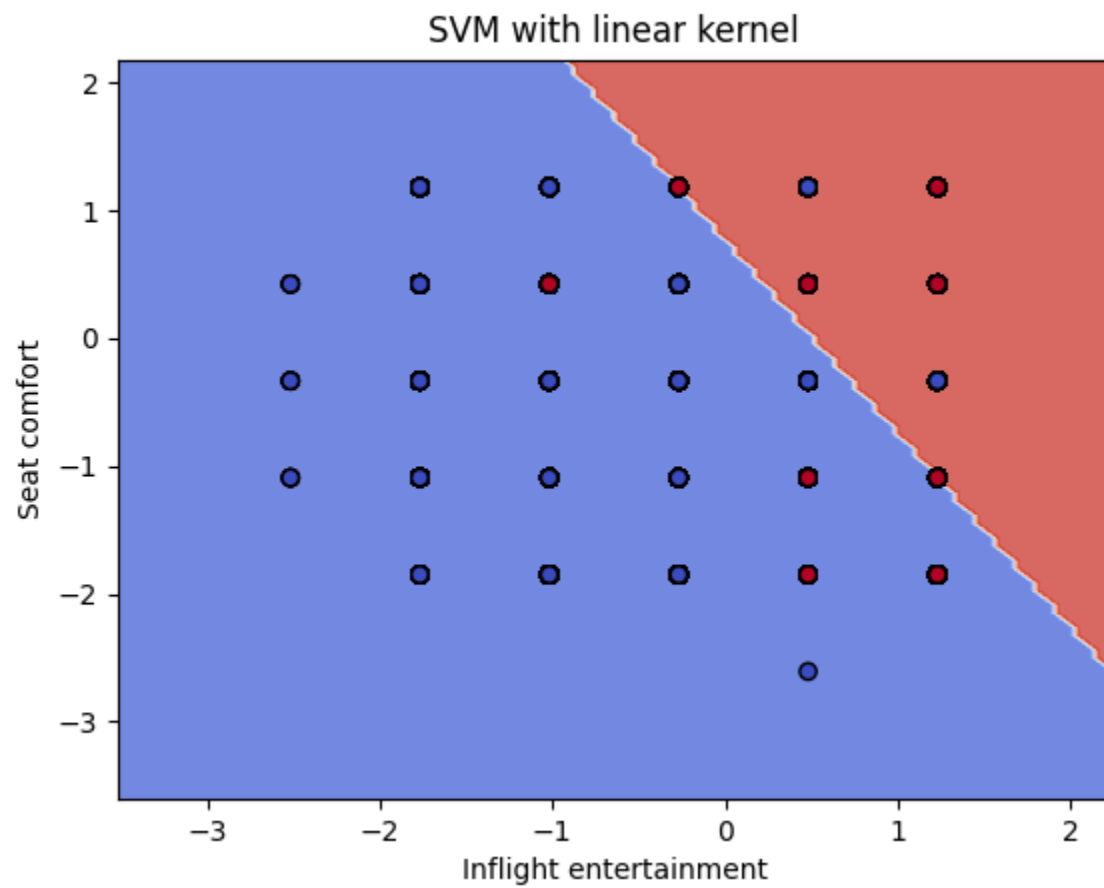

CT = T)

```
Top 10 discriminative features:
Inflight entertainment
Seat comfort
On-board service
Cleanliness
Online boarding
Age
Leg room service
Class
Checkin service
Inflight service
Training Accuracy: 86.42%
Testing Accuracy: 86.16%
```

b.

SVM (linear kernel):  
Training Accuracy: 70.66%  
Testing Accuracy: 70.49%

```
SVM (poly kernel):  
Training Accuracy: 63.75%  
Testing Accuracy: 63.68%
```

3.

The model achieved moderate accuracy. The results are varied based on different parameters.

	Neurons	Epochs	Optimizer	Accuracy
0	100	50	ADAM	73.16
1	100	50	SGD	72.78
2	100	100	ADAM	72.91
3	100	100	SGD	73.82
4	200	50	ADAM	73.43
5	200	50	SGD	74.34
6	200	100	ADAM	72.54
7	200	100	SGD	75.70

4.

```
KMeans Accuracy: 0.7596
Agglomerative Clustering Accuracy: 0.8368
```
